

Software to scale your business.

Flight is an award-winning platform that builds cost-effective, bespoke business process software.

Developed by
blue wren

Improve productivity and unlock your potential

Your business is unique. That is why we customise each software solution to your specific requirements and deliver it in a fraction of the time and for a fraction of the cost of a ground-up development.

After launch, your software can be easily changed and tweaked as your requirements evolve, without any additional cost. And with its own restful API it can be seamlessly integrated with other systems or a front-end website.

Built to your exact requirements

Rapid delivery and deployment

Unlimited changes at no extra cost

Ongoing support & maintenance

Full integration with other systems

Why choose Flight?

Flight is a highly flexible, robust, future-proof solution for any business. As a customer you choose the functionality and features that are right for you. We will help you map your processes and identify what's needed to scale your business.

Our solutions

CRM

Manage the customer journey from initial enquiry through to project delivery. Automate marketing, track performance and manage workflows to deliver first class customer service.

ERP

Get closer to your customers, manage production and stock more efficiently and streamline business operations.

Project Management

Plan and deliver projects with precision. Schedule resources, organise delivery teams and track project progress against time and budget.

Customer Portals

Customer facing websites and portals to offer a 'self-serve' solution or improve customer loyalty by delivering a user-friendly online experience.

Training & Event Management

Plan, schedule and deliver training and events with online booking. Manage venues, attendees and other resources as well as create name badges, certificates, attendee registers.

Harnessing the power of AWS

Flight harnesses the power of Amazon Web Services to provide every customer with a software solution that specifically matches their process and requirements. The level of customisation covers all aspects including storage, workflow, functionality, access and integration.

By aligning the Flight platform to AWS, we take advantage of the most advanced and secure cloud computing infrastructure in the world.

AWS is fully scalable meaning expensive hardware upgrades will never be a consideration. It also means Flight can leverage the extensive and continually enhanced cloud computing services offered by AWS.

Flight is a highly flexible, robust, future-proof solution for any business.

Our 4 step process

1 Map - We learn about your business and produce process maps to define the workflow and features the software must deliver to meet your requirements.

2 Customise - With your process maps, we configure the software; giving you access to a test application to trial.

3 Launch - Once you've tested and signed off your configuration, we migrate your historic data and launch. This will be unique to you and your business.

4 Support - Our dedicated customer service team are on hand to support you. Whether it's tutorials or requests for additional functionality. Continue to make changes at no extra cost.

Ongoing support and development

We provide managed hosting and support. Our comprehensive SLA (service level agreement) incorporates uptime guarantees, ongoing maintenance as well as cloud health alerts, point-in-time backups and telephone and email support.

Trusted by

"Blue Wren used their Flight platform to deliver a CRM & Business Workflow System for a specific sector of our firm. We worked closely with all the team, who endeavoured to ensure that the end product was what we had first envisioned. The team made it possible to produce a fantastic end product, with a responsive ongoing support network if required at any point."

Chris Lawton, Begbies Traynor
